DETAILED ACTION

1. The drawings are objected to under 37 CFR 1.83(b) because they are incomplete. 37 CFR 1.83(b) reads as follows:

When the invention consists of an improvement on an old machine the drawing must when possible exhibit, in one or more views, the improved portion itself, disconnected from the old structure, and also in another view, so much only of the old structure as will suffice to show the connection of the invention therewith.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Specifically, the invention as depicted in fig 1 is unclear because it is unknown where it is situated in the vehicle. Claim 1 provides "a steering shaft (3) [connected to] a steering wheel", and Claim 2 provides "an input shaft (14)... connected at the steering shaft", and "an output shaft (14) transmit[ting] the steering angle to ground wheels". These recitations are insufficient to indicate where the invention is located in the vehicle.

Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency.

Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. The disclosure is objected to because in Claims 3 and 16, "input shaft" lacks antecedent basis.

_. Application/Control Number: 10/694,866

Art Unit: 3611

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The Spec fails to describe <u>where the invention</u>, as recited in the Claims, <u>is located within</u> <u>the vehicle</u>. Therefore, the invention is unclear.

Additionally, it is unclear whether "damper" and "elastic member" are one and the same element. It appears the two elements refer to one single element.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The invention is unclear because the Claims fail to describe the invention's <u>location</u> within the vehicle.

In the relevant claims reciting "damper" or "elastic member", it is unclear if these elements are one and the same, or otherwise. As best understood, it appears as if they refer to the same, single element.

Additionally, Claims 2, 8 and 15 are unclear because it is not apparent that "an input shaft [is] configured to integrally rotate with the housing". That is, the housing does not appear to rotate with the input shaft. It is noted that the Spec does not describe this particularity.

Clarification/amendment is required.

Art Unit: 3611

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

As best understood, Claims 1 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Birsching et al 6378647.

As best understood, Birsching discloses a vehicle comprising

Steering shaft 44 connected with a steering wheel (unidentified, c2, ln 65-66), via shaft

42.

Actuator 30 including

Elastic member/damper 68 positioned at the steering shaft to absorb vibration caused by the actuator.

6. As best understood, Claims 2-13 and 15-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims, and all 112 issues resolved.

Prior art does not disclose the actuator described above as including, *inter alia*, a gear mechanism that adjusts a rotational angle of a motor shaft, and translates this angle to an output shaft.

7 Communication with USPTO/Examiner

Any inquiry concerning this communication, or others, should be directed to Ms. Lum at 703 305-0232, M-F, 9-6. If attempts to reach the examiner are unsuccessful, her supervisor, Ms. Lesley Morris is at 703 308-0629. Our fax number is 703 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for unpublished applications: private PAIR only, for published applications: private or public PAIR. For more information re PAIR: http://pair-direct.uspto.gov.
